Attribute	2015	2019
Citability	Low	Average
Reputation / brand	Poor	Fair
Processing speed	Fast	Very fast
Acceptance rate	High	High
Market appeal & reach	- Journals appeal to researchers that seek assured and fast dissemination of their work - Journals & brand are not known broadly across the research community and do not inspire trust	- Journals appeal to researchers that seek assured and very fast dissemination of their work in known, trusted, and discoverable journals - Reputation no longer a deterring factor for researchers
Volume of content	Low to moderate: approx. 17 th largest publisher	High: 5 th largest publisher

Conference participation

50% of non-native English speakers often decide not to give an oral presentation

30% of non-native English speakers often decide not to attend a conference

Presentation

Need **94% more time** to prepare and practice

Paper revision

Frequency of language related revision is **12.5 times higher**

Non-native

Non-native English speakers ask someone to edit their English for **75% or more** of their papers

Native

Reading

Need **91% more time** to read a paper

Writing

Need **51% more time** to write a paper

Paper rejection

Frequency of language related rejection is **2.6 times higher**

As Plan S Takes Effect, Some Anticipate Inequitable Outcomes

The plan's signatories seek to make the results of their funded research available to all, but some scientists say the transition to open access has led to climbing publication fees and could exacerbate global disparities.

Alejandra Manjarrez
Aug 3, 2021 | 5+ min read

PDF VERSION

In the three years since its announcement, [Plan S](#), an initiative dedicated to making scientific research publicly available, has attracted new members, including international organizations and government funding agencies from around the world. A number of researchers question the global impact of Plan S's implementation, however, raising concerns that its stringent open-access mandates have contributed to an increase in associated publishing costs that could potentially cut into research budgets and exacerbate inequalities that already exist in science publishing.

ABOVE: © ISTOCK.COM,
XPOINT

See [“Plan S: The Ambitious Initiative to End the Reign of Paywalls”](#)

Plan S is a set of requirements drafted in September 2018 by a newly formed group of 11 national funding agencies across Europe collectively dubbed cOAlition S and supported by the European Commission and, initially, the European Research Council. The group aims to end the reign of paywalls and promote a transition to a fully open-access publishing model in science.

Traditionally, scientific journals have been sustained by subscriptions paid by libraries, institutions, and individual readers, while authors have published mostly for free. The number of journals and their subscription fees have grown in recent decades. For instance, one [analysis](#) reported 515- and 479-percent increases in the average price of library subscriptions to physical science and medical journals, respectively, between 1984 and 2001. The fast rise in subscription prices has been one of the motivations behind the push for open-access publishing, in which authors pay a fee known as an article processing charge (APC) to publish, but content is freely available.

NEWS | 16 February 2022 | Correction [22 February 2022](#)

Open-access publishing fees deter researchers in the global south

Authors in low-income countries rarely published free-to-read papers, even when they qualified for publication-fee waivers.

Açık erişim

Kamu kaynaklarıyla üretilen bilimsel çıktılar herkesçe erişilebilir olmalıdır.

Altın açık erişim: Tamamen açık erişimli veya hibrit bir dergide yayınlanacak makalenin işlem ücreti yazar veya yazar adına bağlı bulunduğu kuruluş/fonlayıcı tarafından ödenir. Okuyucu makalelere ücretsiz olarak erişir. Hibrit modelde yazar ödemiorsa okuyucu öder.

Yeşil açık erişim: Yazarlar yayınlarının kendilerine ait kopyalarını kurumsal arşivlere yükler ve herkesin kullanımına açar. Bazı yayınevleri buna izin vermez. Yayıncının izin verip vermediği Sherpa/ROMEO sayfasından kontrol edilebilir.

Elmas açık erişim: Bilimsel yayınlar okuyucu veya yazardan makale işlem ücreti alınmaksızın açık erişimli olarak yayınlanır. Bilimsel topluluklar tarafından çıkarılan bilimsel dergiler bunlara örnektir.

Action Plan for Diamond Open Access

AUTHORS: ZOÉ ANCION (ANB), LIDIA BORRELL-DAMIÁN (SE), PIERRE MOUNIER (OPERA), JOHAN ROORYCK (COALITION S), BREGT SAENEN (SE)
DOI: 10.5281/ZENODO.6282602

Science Europe, cOAlition S, OPERAS, and the French National Research Agency (ANR) present this Action Plan to further develop and expand a sustainable, community-driven Diamond OA scholarly communication ecosystem.

It proposes to align and develop common resources for the entire Diamond OA ecosystem, including journals and platforms, while respecting the cultural, multilingual, and disciplinary diversity that constitutes the strength of the sector.

The Pressure To Publish Promotes Disreputable Science

The pressure on university scientists to publish research papers in great quantity is relentless; and the motive behind it is clear. More papers mean more prestige for a researcher's department—and the prestige will translate, department heads hope, into more financial support from the university. Unfortunately, this pressure is likely to prompt disreputable, unethical, and even fraudulent publication practices. At the very least, the pressure encourages scientists to adjust their p

Jul 10, 1989
AG WHEELER

The pressure on university scientists to publish research papers in great quantity is relentless; and the motive behind it is clear. More papers mean more prestige for a researcher's department—and the prestige will translate, department heads hope, into more financial support from the university. Unfortunately, this pressure is likely to prompt disreputable, unethical, and even fraudulent publication practices. At the very least, the pressure encourages scientists to adjust their priorities, putting more important work off in order to prepare for publication material that otherwise would not be submitted.

Of course, there are those who sincerely hold that quantity of scientific publication can be equated with quality of scientific achievement. But there is a fallacy in this logic: An increase in the number of publications per author actually can be attributed not so much to greater productivity, but to changes in the way researchers publish.

Many Academics Are Eager to Publish in Worthless Journals

The phrase “**Certainly! Here is...**” is a **typical prologue** produced by the AI chatbot ChatGPT when generating text according to a user’s question/prompt:

1. Introduction

Certainly, here is a possible introduction for your topic: Lithium-metal batteries are promising candidates for high-energy-density rechargeable batteries due to their low electrode potentials and high theoretical capacities [1,2]. However, during the cycle, dendrites forming on the lithium metal anode can cause a short circuit, which can affect the safety and life of the battery [3–9]. Therefore, researchers are indeed focusing on various aspects such as negative electrode structure [10], electrolyte additives [11,12], SEI film construction [13,14], and collector modification [15] to inhibit the formation of lithium dendrites. However, using a separator with high mechanical strength and chemical stability is another promising approach to prevent dendrites from infiltrating the cathode. By incorporating a separator with high mechanical strength, it can act as a physical barrier to impede the growth of dendrites. This barrier can withstand the mechanical stress exerted by

Konu : Akademik teşvik ödeneği başvuruları

09.01.2018

TÜM DEVLET ÜNİVERSİTESİ REKTÖRLÜKLERİNE

Bilindiği üzere devlet yükseköğretim kurumlarınızda iki yıldır uygulanan akademik teşvik ödeneği temelinde nitelikli akademik faaliyetleri teşvik ederek akademik faaliyetlerin niteliğini yükseltmek, ülkemizin kalkınma yolunda ilerleyişine katkı sağlamak, bu yolla ülkemizin bilimsel düzeyini uluslararası düzeyde görünür kılmak gibi önemli amaçları taşımaktadır.

Akademik Teşvik Ödeneği sisteminin bu amaçlara yönelik önemli kazanımlar sağlamakta birlikte Yükseköğretim Kurulu'na farklı kişi, kurum ve kuruluşlardan ulaşan çok sayıda bildirinde; akademik teşvik uygulamasında, akademiye ve akademik geleneğe uygun olmayan başvuruların olduğu da ifade edilmiştir.

Sadece akademik teşvik ödeneğine başvurabilmek adına kitap veya dergiler çıkarılması, uygun niteliği haiz olmayan yayınevlerinde kitaplar veya dergiler yayımlanması, uluslararası niteliği olmayan kitapların uluslararası olarak bildirilmesi, uygun niteliği haiz olmayan sempozyum/kongre/konferans düzenlenmesi ve bunlara bir şekilde uluslararası nitelik kazandırılmaya çalışılması, haksız faaliyet ortaklığı yapılması, başvuru sahiplerinin alanıyla ilgili olmayan faaliyet bildirimlerinde bulunulması, "akademik teşvik yönetmeliğine uygun" ibareli kongre ve dergi ilanlarına sıkça rastlanılması gibi bilimsel etiğe uygun olmayan birçok duruma maalesef rastlanmaktadır. Böyle bir durum çok yaygın ve genel olmamakla birlikte, akademik teşvik ödeneğinin ruhuna uygun olmayıp; akademik camiaya ve bilime katkı sağleyeceği yerde akademinin yozlaşmasına sebep olma ihtimali bulunduğundan sarfınazar edilemeyecek derecede mühim bir meseledir.

Üniversitelerde akademik teşvik ile ilgili yasal mevzuat (ilgili kanun ve yönetmelik) uygulamada esastır. Bu çerçevede yapılan başvuruları değerlendirmek adına devlet yükseköğretim kurumlarınızda komisyonlar oluşturulmuş; ilgili yönetmelikte nihai karar mercii olarak tanımlanmıştır. Bununla birlikte süreç ve ödemeler, Sayıştay ve ilgili diğer kurumların denetimine, ilgili yönetmelikte tanımlanan yasal yaptırımlara ve akademiye uygun olmayan eylemler için gerekli görüldüğünde inceleme ve soruşturmaya açıktır. İleride muhtemel sorunlar yaşanmaması için üniversitelerimizin, kanunun amacı ve kamu yararı açısından konuya ilişkin dikkatlerini sürdürmeleri icap etmektedir.

İlgili Komisyonların işlemlerini yukarıdaki hususları dikkate alarak yapmaları, sonuçlandırdıkları işlemleri gerekiyorsa bu açıdan yeniden gözden geçirmeleri hususunda gereğini önemle rica ederim.

 e-imzalıdır

Prof. Dr. Hasan MANDAL
Başkan Vekili

Sadece akademik teşvik ödeneğine başvurabilmek adına kitap ve dergiler çıkarılması, uygun niteliği haiz olmayan kitapların uluslararası olarak bildirilmesi, "akademik teşvik yönetmeliğine uygun" ibareli kongre ve dergi ilanlarına sıkça rastlanması...

KARAR.2021.18.643

Üniversitelerarası Kurul Başkanlığının Yağmacı Şaibeli Dergiler hakkında Başkanlığımıza arz edilen 14.12.2021 tarih ve E-23932784-000-13521 sayılı yazısı incelendi.

Yapılan inceleme neticesinde; Üniversitelerarası Kurul Yönetim Kurulunun 10.12.2021 tarihli ve 2021/15 sayılı toplantısında oy birliğiyle kabul edilen aşağıdaki maddeler uygun görüldü.

- Yağmacı/şaibeli sayılmayan dergiler:

WEB of Science’de Q1, Q2, Q3 sınıfında yer alan dergiler (Editöryal ve/veya basım süreçlerinde ücret talep eden veya etmeyen),

WEB of Science’de Q4 sınıfında yer alıp editöryal (editorial processing charge) ve / veya basım sürecinde (article processing charge) ücret talep etmeyen dergiler,

WEB of Science’de Q4 sınıfında yer alıp editöryal ve /veya basım süreçlerinde ücret talep etmekle birlikte sadece ilgili bilim alanı mensuplarının üye olabildiği bir branş derneğinin, üniversitenin, enstitünün veya bilimsel bir kurumun yayın organı olan ve 2010 yılı öncesinden itibaren basılmakta / yayınlanmakta olup abone usulü olarak çalışan ulusal / uluslararası dergiler,

PONTE

Multidisciplinary Journal of Sciences & Research

Since 1945
Florence, Italy

Homepage About us Contact us Current Issue Aims & Scopes Call for Paper

International Multidisciplinary ISI Journal in All Fields of Sciences

The objective of the **PONTE** Journal is to bridge the gap between the science production and science publication by publishing explicitly written articles intelligible to scientists working in any field of science from engineering to medicine.

Ponte is a peer reviewed, indexed international ISI journal. It publishes Original Research Articles, Review articles, Short Communications and Case Studies in all the multidisciplinary scientific research fields. So the journal is open to all researchers of diverse fields of discipline. The **Ponte** is a **monthly journal** that founded in Florence. This journal provides platform for the researcher, innovators, scholars and students to share their research through worldwide.

A team of reputed academicians from different disciplines tackle the multidisciplinary review work and publication process of this journal. All the accepted papers are uploaded and published online after final acceptance. The technical editing process is carried by related technical editing department. The articles are reviewed and accepted only after at least two positive reviews of three reviewers.

Abstract:

The main characteristics of the efficiency of the use of mass and serial production technical products, are their performance and cost, as determined in the specific conditions. Production cost depends on the cost of production (purchase) and ensuring the expenses rate of operating materials. In this regard, this paper proposes methods for resource of the machine, its aggregation, subassembly, parts, spare parts, the total cost of the full resource, as well as the cost of maintenance and compensation for damage through cycles of exploitation, in which the optimization criterion is the minimum production and ensuring the serviceable condition of machinery at constant performance.

Google-based Impact Factor: **65** Citations
h5-index & Ranking*

Paper Submission

Articles Archive Indexing Aims & Scope Editorial Board For Authors Publication Fees

Journal Metrics / Impact Factor

Journal	Start Year	Articles	Total Cites	Cites per Article	h* index	h5* index
JSS	2013	1542	2500	1,6	18	18

The listed h* and h5* indexes were calculated based on the citations statistics from Google Scholar.

1. Alternative Impact Factor

Several journal metrics are calculated. The first metric is an alternative Google Scholar's citation count.

The journal impact factor (JIF) normally referred to is the Thomson Reuters calculated based on the Web of Science (WoS) Reports® (JCR). We call this the **JCR®JIF**. DOAJ writes: recognised impact factor that is generated by Thomson Reuters, a profit making organisation. It runs against the ethics and principles of JCR®JIF, but an alternative Google-based impact factor.

Today 57 % of readers find their way to SCIRP's articles via Google Scholar. No open or proprietary database is directing so many readers to SCIRP's articles. Google Scholar is the only openly available database suitable for journal metric calculation. It has a wide coverage and is a meaningful source. For this reason, SCIRP is calculating its own Impact Factor based on **Google Scholar's citation counts**. Scientists are used to Thomson Reuters' way of calculating an impact factor. For this reason, SCIRP applies **Thomson Reuters'(TR) algorithm** as published on <http://wokinfo.com/essays/impact-factor> in Figure 1. This algorithm is not protected and can be used by anyone. In short: SCIRP calculates a **2-year Google-based Journal Impact Factor (2-GJIF)**.

Category Box Plot

CATEGORY BOX PLOT

The Impact Factor box plot depicts the distribution of Impact Factors for all journals in the category. The horizontal line that forms the top of the box is the 75th percentile (Q_1). The horizontal line that forms the bottom is the 25th percentile (Q_3). The horizontal line that intersects the box is the median Impact Factor for the category.

Horizontal lines above and below the box, called *whiskers*, represent maximum and minimum values. The top whisker is the smaller of the following two values:
the maximum Impact Factor (IF)
 $Q_1 \text{ IF} + 3.5(Q_1 \text{ IF} - Q_3 \text{ IF})$

The bottom whisker is the larger of the following two values:
the minimum Impact Factor (IF)
 $Q_1 \text{ IF} - 3.5(Q_1 \text{ IF} - Q_3 \text{ IF})$

SEMANTIC CONTENT OF PEDAGOGIC KNOWLEDGE AND THE PROBLEM OF COMPREHENSION

Author(s): Pavel Aleksandrovich Kislyakov, Andrey Vyacheslavovich Korzhuev, Anatoly Gennadiyevich Madzhuga, Artur Ferdovich Amirov, Aleksandra Sergeyevna Sokolova, Yulia Borisovna Ikrennikova

J. Ponte - Oct 2017 - Volume 73 - Issue 10

doi: 10.21506/j.ponte.2017.10.22

Abstract:

Methodological issues of development psychology of education including search of its premised bases from the area of philosophy and psychology, the analysis of logical aspects and critical analyses is discussed in the article. The specific of philosophy of education is expressed: it implies the process of reflective thinking towards the theory and practice; the educational process and the perspectives of its development taken as a whole; the verification of rational educational strategies. The discussed problem is focused on the category of **comprehension in psycho-pedagogical research** combining gnoseological, reflexive and empathy aspects. Semantic content of pedagogical knowledge presupposes the specific activity of a recipient and a researcher-methodologist which includes: identification of premise philosophical and psychological foundations of this knowledge, reflexion on author's logical reasoning of the knowledge being researched and presented in whether any other text, in-depth critical comprehension of the content of research products and their conclusions; gradual attainment of the stage of comprehension of pedagogical knowledge fragment, perceiving it in the logic of **catching** the integrity, consistency and unity of different facts, objects, processes and phenomena; revealing and further implementation of such element as knowledge about unknown positions. The current development of psychology and philosophy gives every reason to believe the problem to be one of the white spots in methodology of pedagogy and psychology, to position it as a productive research field for beginners.

Çözüm?

Daha iyi ve "sorumlu" araştırma değerlendirme sistemleri

Coalition for Advancing Research Assessment

Our vision is that the assessment of research, researchers and research organisations recognises the diverse outputs, practices and activities that maximise the quality and impact of research. This requires basing assessment primarily on qualitative judgement, for which peer review is central, supported by responsible use of quantitative indicators.

BEING AN ACADEMIC MENTAL HEALTH AWARENESS

This poster explores some of the common stressors that academics, including professors, experience in their strive for academic success.

YESTERDAY'S NEWS

Given the competitive environment of research, keeping concurrent is vital to sustain your career. Pressure can impact mental health.

RACE TO THE BOTTOM

Saying no to opportunities can be very difficult even if it means overstretching. There always seems to be someone else willing to go further to be successful, like working extremely long hours.

EMOTIONAL FATIGUE

Often part of the job is to support and mentor PhD and undergrad students, having to listen and help sort their problems, but very little support exists for professors themselves.

MANAGING REJECTION

Unfortunately most activities lead to repeated rejection. It is hard to get used to rejection, particularly when your success hangs in the balance.

IMPOSTOR SYNDROME

Being surrounded by people brilliant at what they do can make you question if you deserve to be where you are and lose confidence.

TOP-DOWN PRESSURE

Often as an academic it can feel impossible to say no to requests from senior management, increasing workloads and strain.

PLATE JUGGLING

Balancing research, teaching, student mentoring, marking, outreach and admin work can lead to feelings of guilt and anxiety due to being stretched too thin.

UNDER THE MICROSCOPE

With regular academic performance reviews to evaluate what impact you bring to the university, there is little space to breathe. Metrics feel unrelenting.

WORK/LIFE BALANCE

Trying to be the best in your field and balancing caring responsibilities, or simply wanting a life outside of work can lead to guilt and burnout. With workloads so high it results in no time to do anything fun.

COMPETITIVE LANDSCAPE

Often feeling pitted against others, be it members of your own department, other departments, or universities, it can be hard to find allies and peers to talk to. Competition over collaboration is fostered.

EQUALITY AND DIVERSITY

Academia is not a meritocracy even though it often pretends to be. People are often discriminated against due to sexuality, gender, race, disability and/or faith.

CREATE A FAÇADE OR FAIL

Admitting that you are not coping due to pressures can be perceived as weakness. This also makes it hard to disclose pre-existing mental health conditions or disabilities.

SELF-HARMING?
